# Clinical case

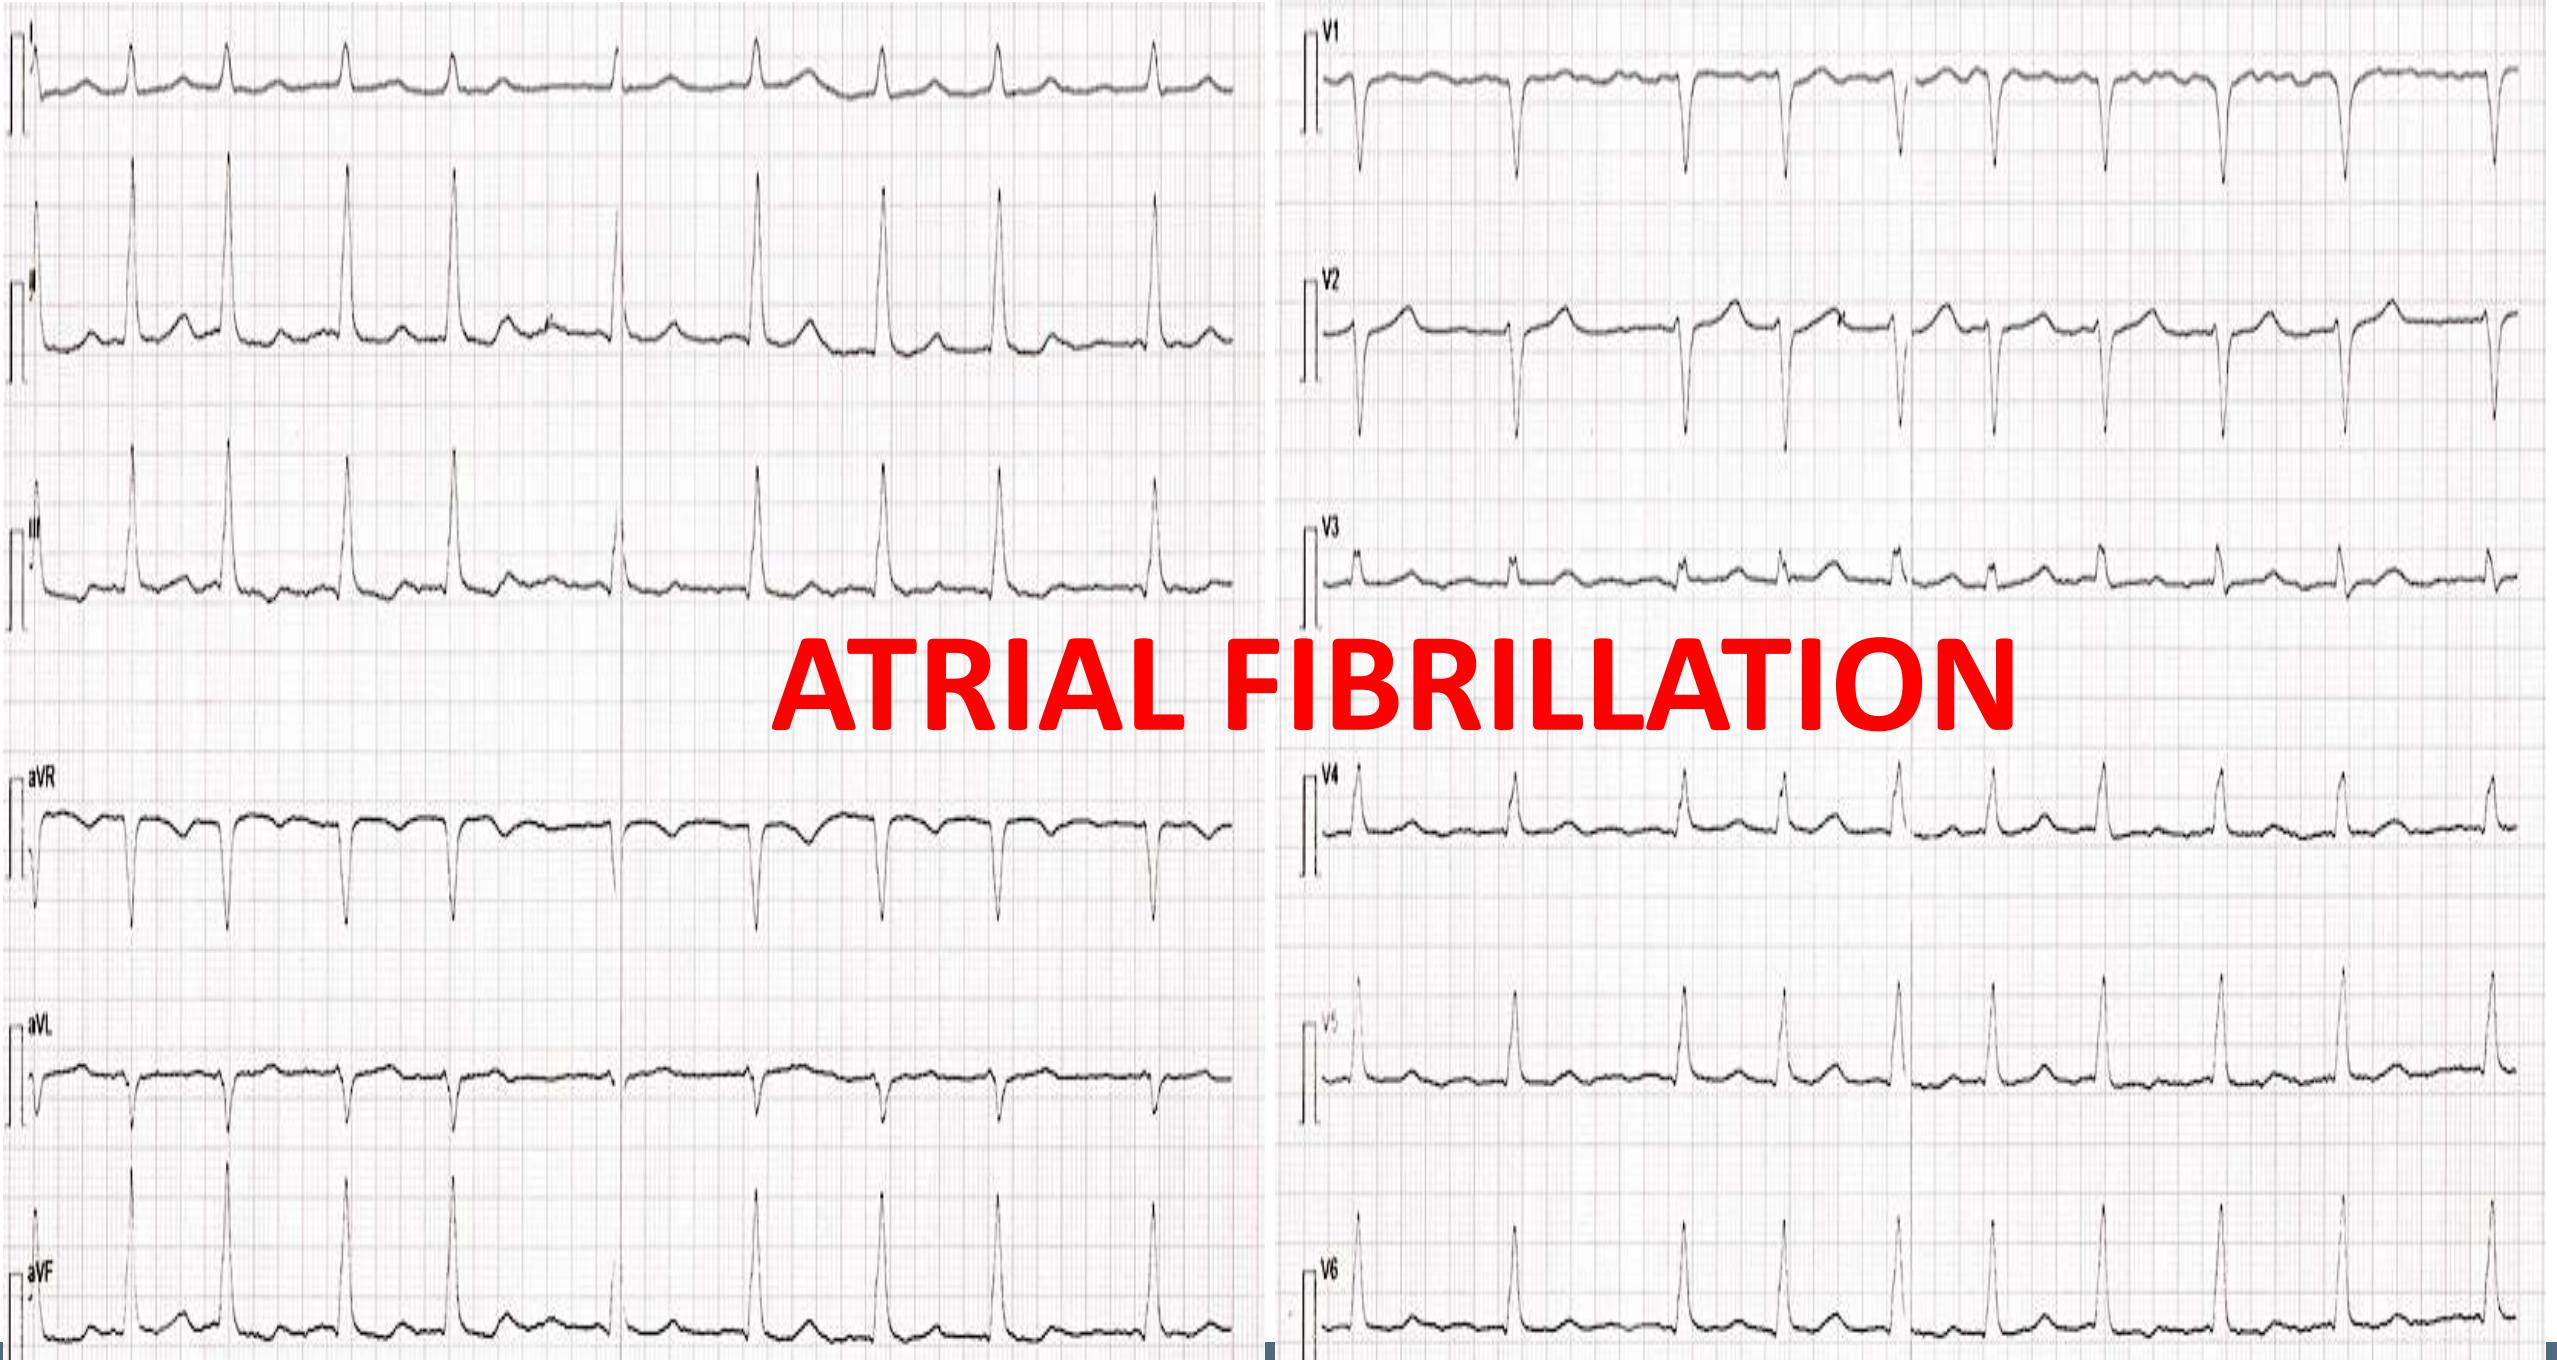

74 years old man

- Chest pain since yesterday
- Tachycardia and palpitations

## Pt. History

- Arterial hypertension
- Transient ischemic attack 2022
- Exclusion of coronary artery disease (coronary angiography 2022)
- HFpEF

# ATRIAL FIBRILLATION

# Atrial fibrillation

3% prevalence in general population

## DEMOGRAPHICS OF AF

Who is at risk for AF?

AF is a common age-related arrhythmia:<sup>3,26,27</sup> it mostly affects people **40 years old and older** and is more **common in men**.

## AF-related OUTCOMES

AF-Related Outcome	Frequency in AF	Mechanism(s)
Death	1.5 - 3.5 fold increase	Excess mortality related to: <ul style="list-style-type: none"><li>HF, comorbidities</li><li>Stroke</li></ul>
Stroke	20-30% of all ischaemic strokes, 10% of cryptogenic strokes	<ul style="list-style-type: none"><li>Cardioembolic, or</li><li>Related to comorbid vascular atherosclerosis</li></ul>
LV dysfunction / Heart failure	In 20-30% of AF patients	<ul style="list-style-type: none"><li>Excessive ventricular rate</li><li>Irregular ventricular contractions</li><li>A primary underlying cause of AF</li></ul>
Cognitive decline / Vascular dementia	HR 1.4 / 1.6 (irrespective of stroke history)	<ul style="list-style-type: none"><li>Brain white matter lesions, inflammation,</li><li>Hypoperfusion,</li><li>Micro-embolism</li></ul>
Depression	Depression in 16-20% (even suicidal ideation)	<ul style="list-style-type: none"><li>Severe symptoms and decreased QoL</li><li>Drug side effects</li></ul>
Impaired quality of life	>60% of patients	<ul style="list-style-type: none"><li>Related to AF burden, comorbidities, psychological functioning and medication</li><li>Distressed personality type</li></ul>
Hospitalizations	10-40% annual hospitalization rate	<ul style="list-style-type: none"><li>AF management, related to HF, MI or AF related symptoms</li><li>Treatment-associated complications</li></ul>

Hindricks et al., 2020 Eur Heart J

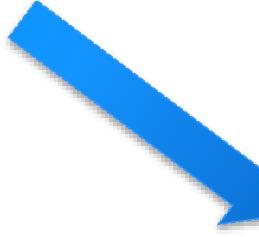

## THERAPY OPTIONS

Rhythm vs. frequency control

- Cardioversion + antiarrhythmics?
- Cardioversion + no therapy change?
- Ablation?

Anticoagulation  
( $CHA_2DS_2-VASC$ -Score)

- 
- Dabigatran
  - Apixaban
  - Rivaroxaban
  - Edoxaban

SPONTANEOUS INITIATION OF ATRIAL FIBRILLATION BY ECTOPIC BEATS

# SARA-Study

Catheter ablation vs. antiarrhythmic drug treatment of persistent atrial fibrillation: a multicentre, randomized, controlled trial  
(n=449)

**Primary Endpoint:** Afib at 1 year

**Follow-up:** 2 years

Mont et al., Eur Heart J 2014

## Recommendation Table 19 — Recommendations for catheter ablation of AF (see also Evidence Table 19)

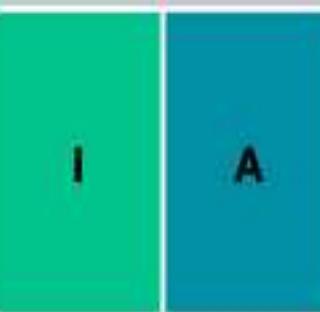

### First-line rhythm control therapy

Catheter ablation is recommended as a first-line option within a shared decision-making rhythm control strategy in patients with paroxysmal AF, to reduce symptoms, recurrence, and progression of AF.<sup>16,591–594</sup>

### AF patients resistant or intolerant to antiarrhythmic drug therapy

Catheter ablation is recommended in patients with paroxysmal or persistent AF resistant or intolerant to antiarrhythmic drug therapy to reduce symptoms, recurrence, and progression of AF.<sup>3,15,503,505,506,508</sup>

### Left atrial catheter ablation

Recommendations	Class <sup>a</sup>	Level <sup>b</sup>
Catheter ablation of AF may be considered in patients with symptomatic long-standing persistent AF refractory to antiarrhythmic drugs.	IIb	C
Catheter ablation of AF in patients with heart failure may be considered when antiarrhythmic medication, including amiodarone, fails to control symptoms.	IIb	B
Catheter ablation of AF may be considered prior to antiarrhythmic drug therapy in symptomatic patients despite adequate rate control with paroxysmal symptomatic AF and no significant underlying heart disease.	IIb	B

<sup>a</sup>Class of recommendation.

<sup>b</sup>Level of evidence.

AF = atrial fibrillation; i.v. = intravenous; LMWH = low molecular weight heparin; OAC = oral anticoagulant; UFH = unfractionated heparin.

Pulmonary vein stenosis	0	0	0	0
Atrioesophageal fistula	0	0	0	0

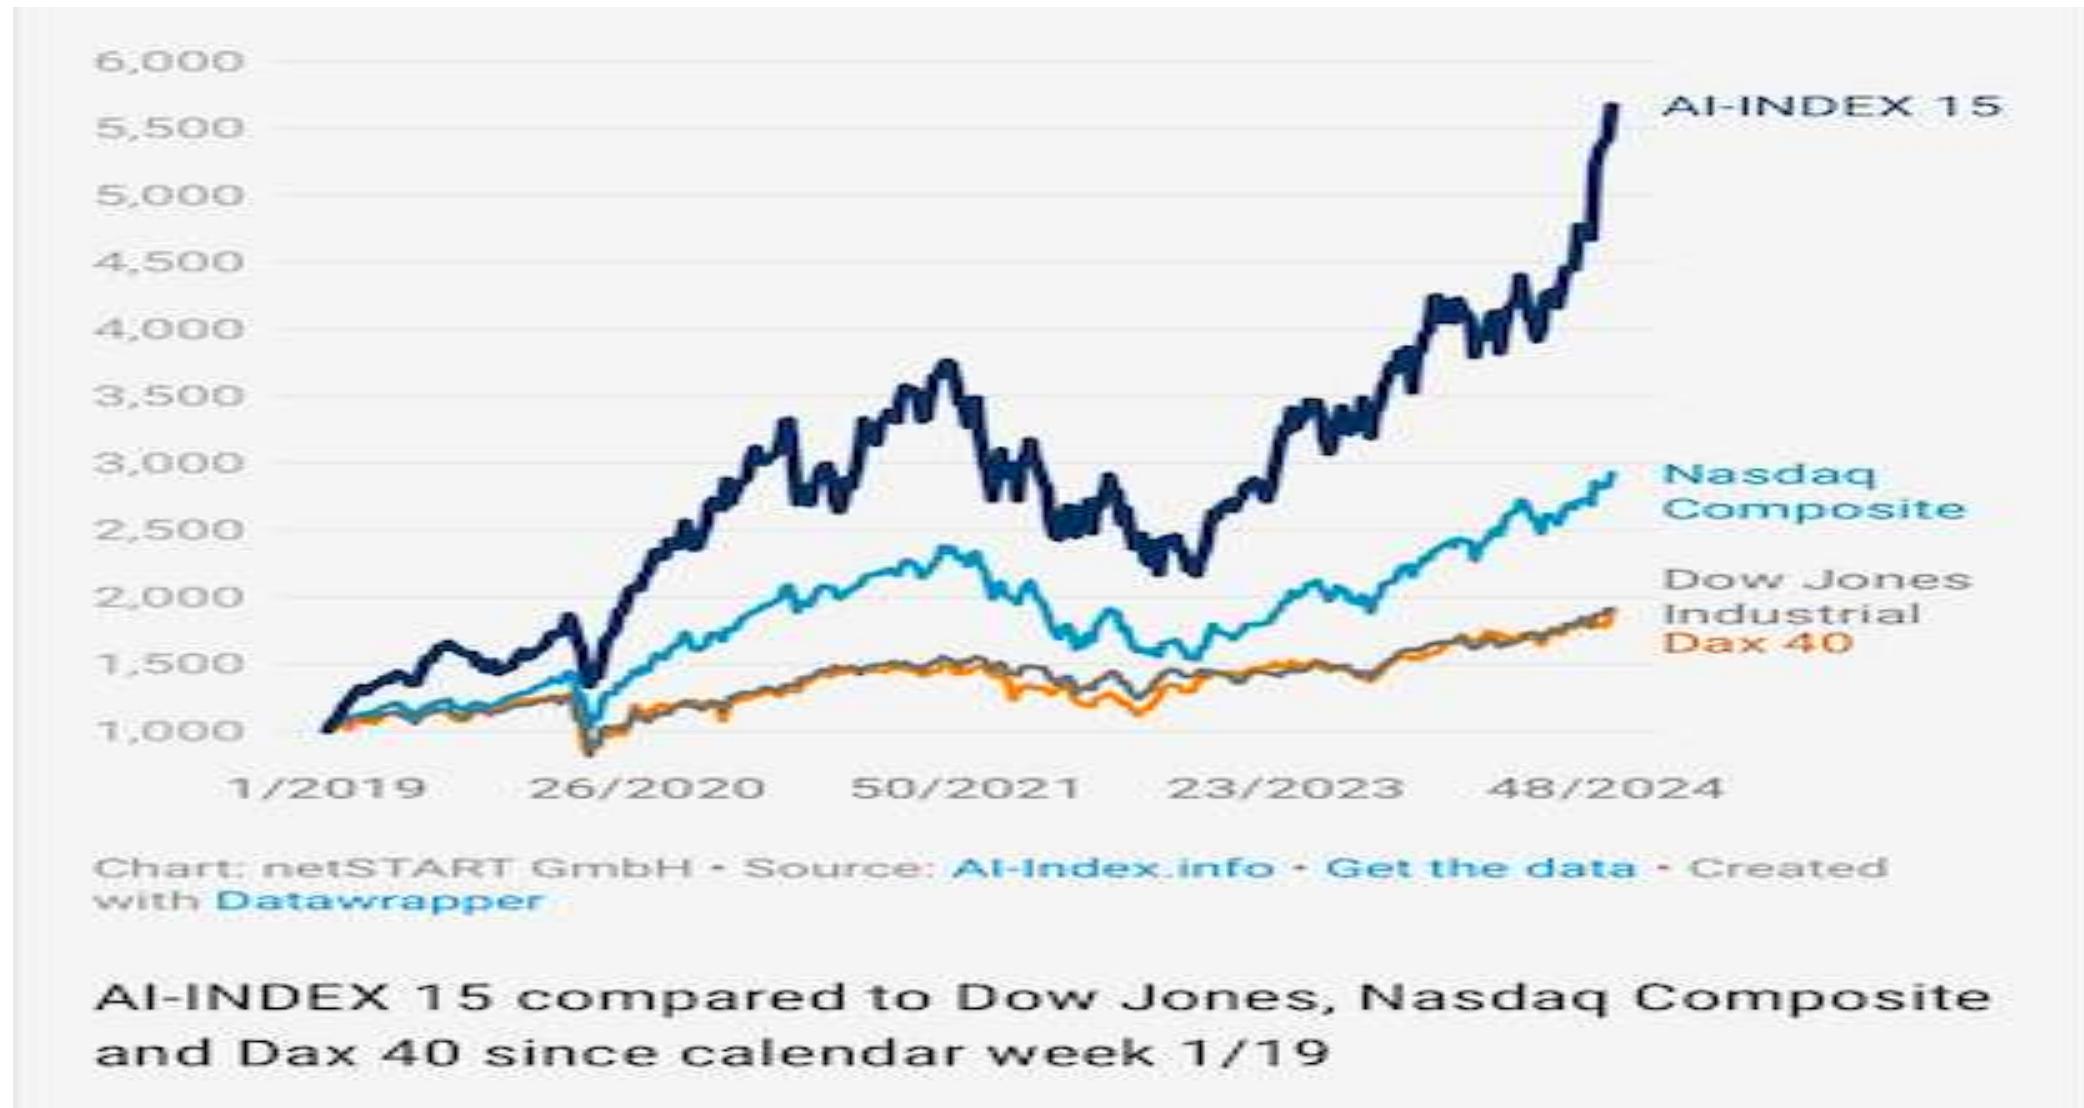

Reddy et al., NEJM, 2023

## First cases in Idar-Oberstein Hospital (n=14)

- Average time < 50 Minutes
- AF-Recurrence: 1/14
- No major complication

# ARTIFICIAL INTELLIGENCE (AI)

# ARTIFICIAL INTELLIGENCE IN CARDIAC ELECTROPHYSIOLOGY?

## TAILORED-AF

first multicenter trial on PVI using artificial intelligence (AI) in persistent AF

n =374 in 26 centres in Europe and North America

- AI-Software identified 3D-guided appropriate ablation sites (n=188)
- Primary endpoint: AF-free survival after 1 year

## Results

- Compared with PVI alone, AI-Guided Ablation Lowers AF at 12 Months (88% vs. 70%, p<0,0001)
- Longer procedure time ( 178 vs 62 minutes, p<0,001)

*Deisenhofer et al, HRS, 2024, Boston*

# CONCLUSION

- Evidence-based medicine in the driving motor of the medical progress
- Ablation is now a standard treatment of atrial fibrillation
- The technological progress will possibly make it more effective and easier in future
- Open for collaboration with our colleagues in Azerbaijan
